## Modular Greenroof Trays, sold a la carte

A modular greenroof is made up of a series of trays, which hold engineered soil and plants. The greenroof can go directly on existing roofs, assuming necessary support exists, without retrofit and the associated costs. It provides the important elements associated with green roofs, including storm water retention, insulation, and membrane protection.

- Available for 4" extensive and 8" intensive applications
- Manufactured with 60% post-industrial recycled HDPE material - most durable, non-cracking or splitting
- Raised drain holes at corners and along channels allow for 3/4" of storm water retention
- Typical saturated weight of 4" system - 15 lbs. per square foot
- Design assistance available as required.

### Advantages of Modular Greenroof Systems:

- Easier roof repair & maintenance
- Quick & easy installation
- Easier green roof maintenance
- May be retrofitted to existing roof
- Pre-engineered components
- Lightweight
- May be pre-planted and pre-grown – a mature roof planted without waiting.

## Green Roof Trays

Part No.	Material	Size	Description
GRT3-242404	HDPE	24" x 24" x 4"D	Extensive GRT greenroof tray, no flanges, rotational molded construction
GRT2-242404	HDPE	24" x 24" x 4"D	Extensive GRT greenroof tray, no flanges, thermoformed construction
GRT2-482404	HDPE	48" x 24" x 4"D	Extensive GRT greenroof tray, no flanges, thermoformed construction
GRT2-242408	HDPE	24" x 24" x 8"D	Extensive GRT greenroof tray, no flanges, thermoformed construction
GRT2-482408	HDPE	48" x 24" x 8"D	Extensive GRT greenroof tray, no flanges, thermoformed construction
