

FOR IMMEDIATE RELEASE

**Tournesol Siteworks announces Australian site furnishings partnership**

***Company to manufacture designs from Brisbane-based Street & Garden Furniture Co. for the North American marketplace***

Hayward, CA – Jun. 24, 2011

Tournesol Siteworks LLC, a manufacturer of products for the commercial landscape market, has announced a new relationship with Street & Garden Furniture Co. of Brisbane, Australia. The Northern-California based company, primarily known as a manufacturer of pots & planters, living wall systems and container irrigation, will be manufacturing bench, table and other site furnishing designs from the Australian manufacturer.

“Street & Garden Furniture has a stable of extremely talented designers and their site furnishings represent a new direction largely unexplored in our market today”, commented Christopher Lyon, president of Tournesol Siteworks. The furniture will be assembled in the company’s Northern California facility, from parts manufactured in the U.S. and Australia.

The first product introduced will be the TWIG bench, a highly configurable public seating solution, developed to promote social interaction. Already a bestseller in Australia and Europe, it will be available in lightweight concrete and lightable polyethylene plastic.

“Street & Garden has over twenty years of developing successful designs for customers such as the City of Brisbane, the City of Sydney for the Olympic Games, and numerous townships, universities, and hospitals” said David Shaw,

president and founder of Street & Garden Furniture. "Tournesol Siteworks shares our concern for the customer and their long-term satisfaction".

Tournesol Siteworks is a national leader in products that connect landscape and architecture. Since 1979 they've manufactured pots, planters, irrigation systems, site furnishings, and most recently living wall and green building components for commercial construction projects. With a wide variety of manufacturing capabilities, they customize standard product platforms to realize any designer's vision for the urban environment.
